

## Job Title: Senior Software Developer

Within Five x Five, our software developers support the Technology Team and are responsible for all aspects of software development and support. The ideal candidate must be entrepreneurially minded and be able to demonstrate strong technical programming skills as well as excellent project management and communication skills.

### **Primary Responsibilities:**

- Design and develop front-end and back-end applications to support business rules using Silverlight and C#
- Develop and write stored procedures and SSIS packages to manipulate data
- Write parameterized reports
- Install and integrate proprietary software within client infrastructure

### **Position Requirements:**

- In general, 5-7+ years of programming experience
- Knowledge and experience with the .NET framework including:

C#	Visual Studio 2008 Development Environment
WPF	Silverlight
WCF/ADO.NET Data services	DataContracts and Serialization
- Experience using Microsoft Blend
- Experience with Entity Framework, Atom Framework, Unity Framework, and CAG/Prism a plus
- Experience with front-end design and implementation and end-to-end software development lifecycle
- Experience with SQL Server 2008, Integration Services, Reporting Services
- Experience building commercial software products vs. internal software
- "Hands On" - ability to research and to try and retry without giving up
